Craig Pilgrim joined Lallemand Ethanol in 2007 as the global marketing and product development manager. He graduated from Mount Mercy College, Cedar Rapids, IA in 1990 with a bachelor's degree in biology and chemistry.

Pilgrim enjoys reading, golfing, and kayaking.

Company History

LALLEMAND
ETHANOL
TECHNOLOGY

Lallemand Ethanol Technology, formed in Milwaukee, WI in 2004, is a unit of Lallemand Inc., the Canada-based yeast and bacteria producer.

Lallemand got into the biofuels industry because yeast and fermentation ingredients are the company's core competencies. We saw a growing market and decided to create value with both its product range and service to the industry.

Lallemand supplies fermentation ingredients—yeast, yeast nutrients, and antimicrobials—and value-creating services—education and on site technical support—to both the fuel ethanol and beverage distilling industries.

Product Line

There are two important things we do. One, we provide a full product line that includes two unique yeast formats. Our main product is called Thermosace®. It is a cake yeast, which results in a quicker start to fermentation due to lack of rehydration time. The other product is called Stabilized Liquid Yeast. It is a unique fresh yeast product with a three-month shelf life and can be dosed automatically, because it is a liquid. It has superior vitality and viability for faster ethanol production. Our Midwest locations allows us to produce and deliver the highest quality and freshest yeasts to the market.

The second important thing we do is educational services. Our value-creating approach is built upon a team of experi-

enced technical sales and service professionals who serve as consultants to alcohol plant staff, identifying specific needs and providing targeted products, training, troubleshooting, and laboratory services.

Our educational arm, the Ethanol Technology Institute, conducts The Alcohol School, The Operators' School and publishes "The Alcohol Textbook". This textbook is a preeminent reference for fuel, distilled beverage, and industrial alcohol producers.

Industry Outlook

The trend in the industry is to get more yield out of what is put into the fermenter. Through our products and knowledge, we have been able to successfully achieve more yield and throughput in numerous facilities. In this age of economic hardship, every dollar counts.
